demo video: https://youtu.be/p28_dmxsosk

In Start method most of arraylist initialized in order to store datas and some classes.

In init method login screen is showed. If username and password is true and user is admin Admin method is called. If not admin PlayerPane method called.

If password or username wrong for max-block it is banned for block-time.

In admin method there are add-film,remove film,edit Users and ok button.

add film when selected Baddfunc called and film added when true inputs entered.

remove film when film is selected is working. Edit user method open new window and all user (except current admin) showed. when ok clicked Player method called.

Player method called and film screen is showed. I added two extra features(2x and 0.5 buttons) others of features are like demo. remove hall just has a problem. when a hall removed, same of rest of halls are created. when ok clicked Chooseseat method is called. and admin can choose seat.

when user login, UserPanel method is called.

UserPanel method is showing films. when user selected a film and click ok button,

UserPlayer called and film is shown. when hall is selected, UserChooseSeat method

is called and user can choose seat. (I have a problem here I disabled ImageView so collor did not change but image can not be clicked).
